## FABRIC FEATURES

### DURABILITY/CLEANABILITY

Phifer's GeoBella® Cushion Fabrics meld style and comfort in a unique line of outdoor cushion fabrics made of 100 percent recycled yarns. GeoBella fabrics feature the look, touchable texture and comfort of indoor furniture yet have the stability, strength and durability needed for outdoor cushion applications. Equally chic as they are eco-friendly, GeoBella fabrics pair the perfect combinations of coordinating hues and intricate weaves for a host of options to suit any decorating need. These fabrics are easy to maintain and clean.

1. Using a sponge or soft cloth, clean fabric thoroughly with mild detergent and water.
2. Rinse entire cushion or umbrella with water.
3. As with any outdoor application, dust and pollen often accumulate on the cushion. If the cushion is exposed to water, these dust particles can create what appears to be a stain. This can easily be removed by soaking the entire cushion with water and allowing it to air dry.

### WARRANTY

Phifer offers a 3-year limited warranty for GeoBella Outdoor Fabrics. This warranty covers the fabric becoming non-functional due to loss of dimensional stability from exposure to conditions including sunlight, mildew, rot and normal atmospheric conditions. The warranty does not cover damage to the fabric from any source nor does it cover gradual fading or discoloration from atmospheric pollution or other debris. This warranty remains in effect for 3 years from the date of purchase. Phifer will provide new fabric, free of charge, to replace the non-functioning fabric. This warranty does not cover the cost of labor or other consequential or incidental expenses.

### GREENGUARD

GREENGUARD Certification ensures products have met some of the world's most rigorous and comprehensive standards for low emissions of volatile organic compounds (VOCs) into indoor air. Phifer was the first manufacturer in the outdoor fabric industry to achieve GREENGUARD certification. Certification is completely voluntary and ensures that the highest industry standards are being applied to maintain indoor air quality for the health and safety of building occupants.
